DataLane – South Park Commons, Amplify, 20VC **January 2026 – Present**
Engineer #5, Employee #9 New York City, NY

DataLane builds market intelligence for outbound sales teams selling to local.

- Helped scale the business from **1.5M -> 5M** ARR, contributing across engineering, operations, recruiting and sales.
- Built distributed Temporal workflows to process **>300gb** weekly incorporation document data into postgres and vector stores. Designed ANN + BM25 candidate retrieval & LLM selection algorithm for a 75% match rate on SMB data. Middesk (760m) performed 65% on the same random sample.
- Built **Foundations**: a data delivery automation product, eliminating an operational burden of roughly **~150 hours / week**. I implemented a UI for building marketing campaigns that scheduled contact enrichments through a **long running priority queue,** using temporal and object storage to orchestrate a network boundary between repositories. It allowed us to operate at maximum throughput based on measured bottlenecks (250 pods).
- Optimized **R&D spend** across GCP, Modal, Model Providers, Neon, Porter, Turbopuffer, Temporal, Twilio, Vercel, etc saving **25k+ monthly**. Designed an internal LLM evaluation framework and swapped hundreds of model callsites, streamlined compute policies across various vendors, and improved system throughput and efficiency.

Rippling – [Python, Mongo, AWS, Typescript, Terraform, React Native] **June 2022 – December 2025**
Software Engineer 2 – Travel, Spend Management, Banking New York City, NY

- Built offer-provider agnostic Company Negotiated Hotel and Car Rental Rates, saving customers **250k annually**. Aligned stakeholders across Web, Mobile, Product, Support, and external partners (Duffel, Sabre).
- Built accounting support for millions of travel-related financial transactions. Owned cross-platform delivery and product discovery across Travel, HRIS, and Spend teams. Designed **O(n)** algorithm to guarantee reliability.
- Built a provider-agnostic, multi-region virtual corporate card service boundary layer across multiple engineering teams powering financial transactions under 2.5s SLA. The system has processed **$3M+** volume across flights and hotels, supporting Travel's scale to **250k+** ARR within 2 months of launch.
- **NY engineering lead** for Travel, responsible for mentoring and onboarding incoming hires and an intern; led workshop **lecturing 75+ interns** and authored widely adopted **AI Best Practices guide** for our R&D org.
- Globalized Spend's invoicing infrastructure for multi-country Corporate Card expansion, backfilling entities and currencies on **millions** of objects (Cards, Transactions, Authorizations, Expenses, Bills, Invoices).
- Contributed to Spend's growth fromx launch to **1k+** customers (**10M+** ARR after 2 years) through Accounting Integrations, Global Card Issuing, Entity Management and Bill Pay features.
- Completed **25+** week-long, **24/7** on-call rotations, resolving critical production incidents, compliance audits, and high-priority support cases while maintaining **99.9%+** uptime SLA for payment processing.
- Built extensible service-oriented architecture syncing **500k+** transactions to legacy accounting systems (QuickBooks, NetSuite, Xero). Documented integration patterns and led cross-functional workshops.

Polis Technologies, Inc. – [Python, Typescript, React Native, Terraform, ECS]. **May 2025 – Present**
Co-Founder, CTO – polisus.com, *Won **7th congressional hackathon** and met with **5+ offices**.*

Meta (formerly, Facebook) – [React, PHP, Thrift, Hack, GraphQL, Python] **September – December 2021**
Front-end Engineer Intern, Service Efficiency and Capacity Tools New York City, NY

Apple – [Swift, Mac Catalyst, XCode] **June – September 2021**
Software Engineer Intern, HID Haptics Software Tools Cupertino, CA

EDUCATION

Dartmouth College, Class of 2022 **GPA 3.8/4.0**
*Bachelor of Arts, Double Major in Computer Science (**Honors**) and Economics (**Honors**)* Hanover, NH

Highlighted Coursework: Algorithms, Discrete Mathematics, Full Stack Web Development, Software Design and Implementation (Tutor), Database Systems*, Object Oriented Programming (Tutor), Artificial Intelligence (TA), ML, Graph Theory, Behavioral Economics, Microeconomics (TA), Macroeconomics (TA) and Econometrics
Honors: Dartmouth Economics Research Scholar, Presidential Scholar, Social Impact Fellow, Eagle Scout, TA, RA
