DataLane – South Park Commons, Amplify, 20VC

Engineer #5, Employee #9

January 2026 – Present

New York City, NY

DataLane builds market intelligence for outbound sales teams selling to local.

- Helped scale the business from **1.7M** -> **4M** ARR, contributing across engineering, operations, recruiting and sales.
- Built distributed Temporal workflows to processes **>300gb** weekly incorporation document data, processed into postgres and vector stores. Designed ANN + BM25 candidate retrieval & LLM selection algorithm for a 75% match rate on SMB data. Middesk (760m) performed 65% on the same random sample.
- Built **Foundations**: a data delivery automation product, eliminating an operational burden of roughly **~150 hours / week**. I implemented customer marketing campaigns that scheduled enrichments through a **long-running priority queue**. I used temporal and object storage to orchestrate the network boundary between the two repositories. It allowed us to operate at maximum throughput based on measured system bottlenecks.
- Optimized **company spend** across GCP, Modal, Model Providers, Neon, Porter, Turbopuffer, Temporal, Twilio, Vercel, etc saving **25k+ monthly**. Designed internal LLM evaluation framework and swapped hundreds of model callsites, streamlined compute policies across various vendors, and improved system throughput and efficiency.

Rippling – [Python, Mongo, AWS, Typescript, Terraform, React Native]

Software Engineer 2 – Travel, Spend Management

June 2022 – December 2025

New York City, NY

- Built offer-provider agnostic Company Negotiated Hotel and Car Rental Rates, saving customers **250k annually**. Aligned stakeholders across Web, Mobile, Product, Support, and external partners (Duffel, Sabre).
- Built accounting support for millions of travel-related financial transactions. Owned cross-platform delivery and product discovery across Travel, HRIS, and Spend teams. Designed **O(n)** algorithm to guarantee reliability.
- Built a provider-agnostic, multi-region virtual corporate card service boundary layer across multiple engineering teams powering financial transactions under 2.5s SLA. The system has processed **\$3M+** volume across flights and hotels, supporting Travel's scale to **250k+** ARR within 2 months of launch.
- **NY engineering lead** for Travel, responsible for mentoring and onboarding incoming hires and an intern; led workshop **lecturing 75+ interns** and authored widely adopted **AI Best Practices guide** for our R&D org.
- Globalized Spend's invoicing infrastructure for multi-country Corporate Card expansion, backfilling entities and currencies on **millions** of objects (Cards, Transactions, Authorizations, Expenses, Bills, Invoices).
- Contributed to Spend's growth from launch to **1k+** customers (**10M+** ARR after 2 years) through Accounting Integrations, Global Card Issuing, Entity Management and Bill Pay features.
- Completed **25+** week-long, **24/7** on-call rotations, resolving critical production incidents, compliance audits, and high-priority support cases while maintaining **99.9%+** uptime SLA for payment processing.
- Built extensible service-oriented architecture syncing **500k+** transactions to legacy accounting systems (QuickBooks, NetSuite, Xero). Documented integration patterns and led cross-functional workshops.

Polis Technologies, Inc. – [Python, Typescript, React Native, Terraform, ECS].

Co-Founder, CTO – polisus.com, Won **7th congressional hackathon** and met with **5+ offices**.

May 2025 – Present

Meta (formerly, Facebook) – [React, PHP, Thrift, Hack, GraphQL, Python]

Front-end Engineer Intern, Service Efficiency and Capacity Tools

September – December 2021

New York City, NY

Apple – [Swift, Mac Catalyst, XCode]

Software Engineer Intern, HID Haptics Software Tools

June – September 2021

Cupertino, CA

EDUCATION

Dartmouth College, Class of 2022

Bachelor of Arts, Double Major in Computer Science (Honors) and Economics (Honors)

GPA 3.8/4.0

Hanover, NH

Highlighted Coursework: Algorithms, Discrete Mathematics, Full Stack Web Development, Software Design and Implementation (Tutor), Database Systems*, Object Oriented Programming (Tutor), Artificial Intelligence (TA), ML, Graph Theory, Behavioral Economics, Microeconomics (TA), Macroeconomics (TA) and Econometrics

Honors: [Dartmouth Economics Research Scholar](#), Presidential Scholar, Social Impact Fellow, Eagle Scout, TA, RA

Madison Reed – [JavaScript, Python]

January – March 2021

Machine Learning Intern

San Francisco, CA

- Built custom model trained with >50k migrated images into our chat bot (“Madi”) that suggests hair products.
 - Implemented facial recognition into Madi to filter for unwanted input, improving accuracy by 20%.
-

- Delivered cards with custom intervals in <1 week following an internal release of employee remote stipends.

apple

PROJECTS

Sign Language Virtual Reality – [Publication](#) – [Oculus Quest, C#, Unity, Mongo]

June 2020 – Present

- Developed [app](#) using artificial reality to teach sign language with the Oculus.
- Created self-learning model to predict valid alphabetical signs, trained with data from months of user research.

NH Absentee Ballot Registration – [React, Express, Mongo, Heroku]

March 2020 – Present

- Developed mobile-friendly web app for NH government to let 4,000+ people submit remote voting ballots.
- Built backend API and scripts to validate signatures, embed user data onto PDFs, and email to Hanover clerk.

DALI Lab @ Dartmouth College – [Ruby on Rails, JavaScript, Unity, Mongo, etc.]

May 2019 – January 2021

Full Stack Engineer

Hanover, NH

- Translated client requests into backend architectures, designed database layouts, and deployed applications.
- Developed full-stack [app](#) to detect and prevent phishing amongst Dartmouth affiliates. Currently being expanded to other universities with \$10,000 worth of funding (React/Ruby/Postgres/Heroku/Dartmouth VPN).

A quantitative-minded entrepreneur with 6 years of software engineering experience.

ROHITH MANDAVILLI

169 Johnson Avenue, New York City, 11206 | (512) 438-9005 | rohith.mandavilli@gmail.com

WORK EXPERIENCE

DataLane – South Park Commons, Amplify, 20VC (22.5m Series A)

January 2026 – Present

Engineer #5, Employee #9

New York City, NY

DataLane builds the market intelligence layer for outbound-oriented enterprise sales organizations selling to local.

- Helped scale the business from **2.7M** -> **4M** ARR. Contributed across engineering, operations, recruiting and sales.
- Built distributed Temporal workflows to processes **>300gb** weekly of incorporation document data, processed into postgres and vector stores. Designed ANN + BM25 candidate retrieval & LLM selection algorithm to match with 75% of SMB account data. Middesk (startup built on entity data) performed 65% on the same random sample.

- Designed a product to automate customer delivery of contact data pipelines, eliminating an operational burden of roughly **~150 hours / week**. I implemented customer marketing campaigns that scheduled enrichments through a long-running priority queue. I used temporal and object storage to orchestrate the network boundary between the two repositories. It allowed us to operate at maximum throughput based on measured system bottlenecks.
- Optimized company spend across GCP, Modal, Model Providers, Neon, Porter, Turbopuffer, Temporal, Twilio, Vercel, etc saving **25k+ monthly**. Designed internal LLM evaluation framework and swapped hundreds of model callsites, streamlined compute policies across various vendors, and improved system throughput and efficiency.

Rippling – [Python, Mongo, AWS, Typescript, Terraform, React Native]

June 2022 – December 2025

Software Engineer 2 – Travel, Spend Management

New York City, NY

- Built offer-provider agnostic Company Negotiated Hotel and Car Rental Rates, saving customers **250k annually**. Aligned stakeholders across Web, Mobile, Product, Support, and external partners (Duffel, Sabre).
- Built accounting support for millions of travel-related financial transactions. Owned cross-platform delivery and product discovery across Travel, HRIS, and Spend teams. Designed **O(n)** algorithm and to guarantee reliability.
- Built a provider-agnostic, multi-region virtual corporate card service boundary layer across multiple engineering teams powering financial transactions under 2.5s SLA. The system has processed **\$3M+** volume across flights and hotels, supporting Travel's scale to **250k+** ARR within 2 months of launch.
- As the **main contributor** across multiple engineering teams (Travel, Spend, Procurement), I implemented an protocol-driven architecture enabling Just-in-Time Virtual Corporate Card Generation, a **quarterly objective**. These cards provided instantaneous bookings and unblocked Travel Beta. This integration touched Stripe, Marqeta, Evervault (encryption) and Duffel (offers provider).
- **NY engineering lead** for Travel, responsible for mentoring and onboarding incoming hires and an intern; led workshop **lecturing 75+ interns** and authored widely-adopted **AI Best Practices guide** for our R&D org.
- Globalized Spend's invoicing infrastructure for multi-country Corporate Card expansion, backfilling entities and currencies on **millions** of objects (Cards, Transactions, Authorizations, Expenses, Bills, Invoices).
- Contributed to Spend's growth from launch to **1k+** customers (**10M+** ARR) through Accounting Integrations, Global Card Issuing, Entity Management and Bill Pay features.
- Completed **25+** week-long, **24/7** on-call rotations, resolving critical production incidents, compliance audits, and high-priority support cases while maintaining **99.9%+** uptime SLA for payment processing.
- Built extensible service-oriented architecture syncing **500k+** transactions to legacy accounting systems (QuickBooks, NetSuite, Xero). Documented integration patterns and led cross-functional workshops to enable Engineering, Sales, and Support teams to independently debug customer issues, reducing escalations.

Polis Technologies, Inc. – [Python, Typescript, React Native, Terraform, ECS].

May 2025 – Present

Co-Founder, CTO – polisus.com

- Founded Polis, a civic networking platform connecting Senators and House members with their constituents, and designed a scalable & hexagonal full-stack system integrating with multiple congressional data sources.
- Presented platform capabilities at the **7th congressional hackathon** and met with **5+ offices** to gather feedback.

Meta (formerly, Facebook) – [React, PHP, Thrift, Hack, GraphQL, Python]

September – December 2021

Front-end Engineer Intern, Service Efficiency and Capacity Tools

New York City, NY

- Developed full-stack features to provide visibility into system resources and implemented key prioritization tools that improved engineers' efficiency in managing node infrastructure.

Apple – [Swift, Mac Catalyst, XCode]

June – September 2021

Software Engineer Intern, HID Haptics Software Tools

Cupertino, CA

- Developed a cross-platform haptics rendering framework using Mac Catalyst in Swift, implementing an MVC-based architecture & UI through user-focused studies in a cross-functional environment.
